

THE TRAPPER

The Trapper, a robust pipeline basket strainer, is designed to protect pumps and other industrial equipment by trapping solids that are carried through the liquid flow.

Easily fitted into any piping system, the Trapper has four sizes to meet most flow requirements, namely:

50mm, 80mm, 100mm and 150mm.

Trapper Features:

- * Standard filters can withstand pressure up to **10 bar**
- * Custom designed filters are available to meet higher pressure requirements
- * **Horizontal or vertical design** options are available to suit piping structures
- * Quick release bolts for easy access to the basket
- * Housing Material - Mild Steel or Stainless Steel
- * Basket material – Stainless Steel

Optional - Trapper Basket:

The Trapper has a removable basket which should be regularly cleared of solid matter to ensure maximum flow and efficiency. **Pressure gauges** can be fitted on both the inlet and outlet pipes to monitor blockage.

Standard slots are 6mm wide to allow for maximum flow of viscous fluid however can be reduced/increased upon request.

Optional support stands can be fitted to meet specific requirements.
